REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art of record fails to disclose or suggest the in-situ dense non-aqueous phase liquids treatment process including heating and extracting the rapid release contaminant resulting in the solidification of the dense non-aqueous phase liquids as called for in claim 1. The prior art includes Vinegar, et al. (U.S. Patent number 6,102,622), which teaches a similar process including heating and removing. Vinegar teaches that the process desirably avoids solidification: "More preferably, DNAPLs are removed by pumping liquids from wellbore until mostly water is being pumped. One reason for this is that applying heat to the DNAPLs when the DNAPLs saturate the soil in contact with the wellbore may decompose in them to coke. Significant amounts of coke would reduce permeability of the perforations" (col. 3, line 27). Roy, et al. (U.S. Patent number 5,587,324) teaches a process of treating coal tam by solidification by mixing with coke.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kreck whose telephone number is (703)308-2725. The examiner can normally be reached on M-F 5:30 am - 2:00 pm.
